

HOW TO PLAY

- ▶ Write a number in each square of the template from the range the game instructor gives you (1-10, 1-20, or 1-50). Remember you will not be able to change these numbers once the game starts.
- ▶ The game instructor will tell you how many squares you need to mark to win the game. In a normal game you mark all 16 squares to win, but you can also play until you get four numbers in a row (either horizontal, vertical or diagonal).
- ▶ The game instructor will read maths questions out loud. Work out the answer as quickly and accurately as you can. If the answer is a number on your sheet, cover the number with a Mathletics counter, or highlight it.
- ▶ Keep playing until all the numbers you need to win are marked. When you get the last number, call out "BINGO!" and raise your hand. The game instructor will check your card to make sure you're the winner!
