Improvement

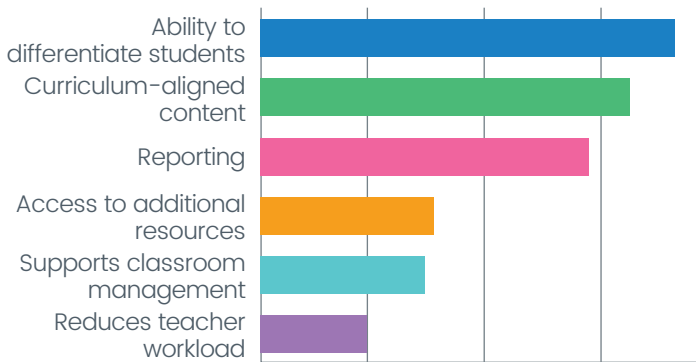

*Measured by avg. initial score in Mathletics curriculum activity to avg. best score in Mathletics curriculum activity.

Mathletics is the ultimate math resource engineered for maximum engagement. It allows both teacher-led and student-driven learning, developing confidence as it builds understanding.

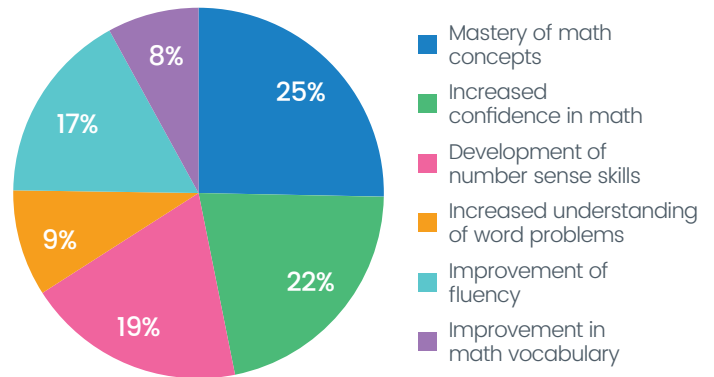

An independent study of 8 000 schools over a five-year period verified that students using Mathletics for as little as 30 minutes per week gained a 9% advantage on standardized assessments. This score advantage was consistent across grades 3, 5, 7, and 9. And sustained use over time led to an even greater advantage.

Feedback from teachers

The most valuable aspects of Mathletics:

Math goals teachers found to be supported by Mathletics

I see Mathletics as an extremely valuable asset to my Math program. We use it often to supplement classroom teaching and continually practice many Math skills. Mathletics is very user friendly and easy for both students and teachers to access. There are also an incredible number of resources available for teacher use on the site. It is an extremely valuable program that is teaching our kids to love learning Math. Mathletics has changed how I teach Math. It allows for differentiation and personalized learning for every student. Mathletics provides opportunities to assign tasks to individual students at various academic levels and continually monitor their progress. I would highly recommend this program to teachers!
